The radial nerve divides into a superficial (sensory) and deep (motor) branch at the cubital fossa. The deep branch of the radial nerve winds to the back of the forearm around the lateral side of the radius between the two planes of fibers of the Supinator, and is prolonged downward between the superficial and deep layers of muscles, to the middle of the forearm.

Respiratory groups. The respiratory centre is divided into three major groups, two in the medulla and one in the pons. The two groups in the medulla are the dorsal respiratory group and the ventral respiratory group. In the pons, the pontine respiratory group is made up of two areas - the pneumotaxic centre and the apneustic centre. The dorsal and ventral medullary groups control the basic ...

C. Caaba, an ancient Arab temple, a small square structure in the grand mosque of Mecca, with a mysterious black stone, probably an aerolite, built in it, on which all pilgrims who visit the shrine imprint a kiss; "the Keblah of all Moslem, the eyes of innumerable praying men being turned towards it from all the quarters of the compass five times a day."
