Differential equations. A linear differential equation is a differential equation that is defined by a linear polynomial in the unknown function and its derivatives, that is an equation of the form  $y' + p(x)y = q(x)$ , where  $p(x)$ ,  $q(x)$  and  $y(x)$  are arbitrary differentiable functions that do not need to be linear, and  $y', y'', \dots$  are the successive derivatives of the unknown function  $y$  of  $x$ .
