Linear maps are mappings between vector spaces that preserve the vector-space structure. Given two vector spaces V and W over a field F , a linear map (also called, in some contexts, linear transformation or linear mapping) is a map: $T: V \rightarrow W$ that is compatible with addition and scalar multiplication, that is $T(u+v) = T(u) + T(v)$ and $T(au) = aT(u)$ for any vectors u, v in V and scalar a in F .
